

Set Up Mail Client for "team@worlddomination.dev"

When you access an email account through a desktop email application such as "KDE Kmail", the email application will require specific information about your email account. You can use the auto-configure options below to attempt to automatically configure your email application. If the available options are not compatible with your application, you will need to use the **Manual Settings** information.

Mail Client Automatic Configuration Scripts

Listed below are the available mail client automatic configuration scripts. Select the script for your mail client and operating system.

Application	Protocols
Mozilla Thunderbird®	Auto Config
KDE Kmail	Auto Config
iOS for iPhone/iPad/iPod and MacOS® Mail.app®	IMAP over SSL/TLS (/cpsess4005887258/backend/
Mail for Windows® 10	Auto Discovery
Microsoft Outlook 2010® for Windows®	Auto Discovery
Windows Live Mail® 	IMAP over SSL/TLS (/cpsess4005887258/backend/
Microsoft Outlook 2007® for Windows®	Auto Discovery

Mail Client Manual Settings

If you do not see an auto-configuration script for your client in the list above, you can manually configure your mail client using the settings below. We recommend that you use IMAP (INTERNET MESSAGE ACCESS PROTOCOL) and SMTP (Simple Mail Transfer Protocol) for your email account rather than ActiveSync unless you are on Android and need calendar and contacts support or push updates.

Secure SSL (Secure Sockets Layer)/TLS (Transport Layer Security) Settings (Recommended)

Username: team@worlddomination.dev

Password:	<i>Use the email account's password.</i>
Incoming Server:	mail.worlddomination.dev IMAP (INTERNET MESSAGE ACCESS PROTOCOL) Port: 993 POP3 (POST OFFICE PROTOCOL 3) Port: 995
Outgoing Server:	mail.worlddomination.dev SMTP (Simple Mail Transfer Protocol) Port: 465
IMAP, POP3, and SMTP require authentication.	

Show Non SSL/TLS Settings ▼

Email Instructions

Send configuration information for "team@worlddomination.dev" to the following email address:

Notes:

- IMAP email access coordinates between the server and your mail application. Messages that have been read/deleted/replied to will show up as such, both on the server and in the mail application.
- POP3 does not coordinate with the server. Messages marked as read/deleted/replied to in the mail application will not show up as such on the server. This means that future mail downloads with POP3 will show all messages as unread.
- Outgoing mail is sent using SMTP.
- We recommend using POP3 over SSL/TLS or IMAP over SSL/TLS since they provide increased security for your interactions with the remote mail server.
